

Bryan Loh – Security Engineer

Sydney, Australia | bryan.loh@student.unsw.edu.au | +61 449 633 285 | [LinkedIn](#)

SKILLS

Web Security Tools: Burp Suite · ffuf · sqlmap · Gobuster · Metasploit · nmap · Wireshark

Languages: Java · Python · JavaScript · HTML/CSS · SQL · Bash

Concepts: OWASP Top 10 · Web Application Vulnerabilities · Authentication & Authorisation (JWT, OAuth 2.0)

WORK EXPERIENCE

Senior Resolution Generalist — IKEA Australia | Sydney

Sep 2024 – Present

- Discovered and responsibly disclosed an IDOR vulnerability allowing any authenticated user to access other customers' PII (name, email, phone, address), affecting 13,000+ customers
- Resolved customer cases ranging from routine to highly complex, communicating clearly to deliver positive outcomes while balancing customer needs against company policy

Software Engineer — DBS Bank & Tata Consultancy Services | Singapore

Sep 2022 – Jul 2024

- 2 years of backend and full-stack development across banking and enterprise platforms, building REST APIs and Spring Boot services components which provides a developer's understanding of how web applications are structured and where vulnerabilities arise

SECURITY EXPERIENCE

Extended Web Security — UNSW

- Structured web application penetration testing course targeting OWASP Top 10 vulnerability classes, with written pentest report deliverables for each exercise.
- **Active Recon:** Directory and subdomain enumeration using ffuf; DNS record mapping via nslookup to identify attack surface
- **SQL Injection:** Manual injection point discovery; UNION-based and blind timing attacks for data extraction; automated enumeration with sqlmap
- **Server-Side Injection:** SSTI via Jinja2 for RCE; stored and reflected XSS exploitation; malicious file upload escalating to reverse shell
- **LFI & Auth Testing:** LFI to read server-side files; authorisation bypass testing; weak credential exploitation; TOTP and OAuth flow manipulation
- **Reporting:** Structured pentest reports covering vulnerability description, reproduction steps, severity rating, and remediation recommendations

Jingle CTF 2025 — ACUCyS

Dec 2025

- Solved web application challenges by identifying and exploiting authentication flaws and injection points using Burp Suite
- Completed digital forensics challenges involving file analysis, metadata extraction, and artefact recovery

EDUCATION

Master of Information Technology (Cyber Security Engineering)

Feb 2025 – Dec 2026

University of New South Wales (UNSW), Sydney

WAM: 85/100 (High Distinction) | UNSW International Scientia Coursework Scholarship

Relevant Courses: Extended Web Security · Security Assessment · Extended Security Engineering · Digital Forensics

Bachelor of Engineering (Mechanical) — First Class Honours

2019 – 2022

National University of Singapore (NUS)

GPA: 4.90 / 5.00 | Developed structured problem-solving and systems thinking through rigorous engineering training — directly applicable to software architecture and root cause analysis

CERTIFICATIONS & TRAINING

Cross-Site Scripting (XSS) Module – HackTheBox Academy

Apr 2026

Attacking Web Applications with Ffuf Module – HackTheBox Academy

Mar 2026

Practical Ethical Hacking – TCM Security

Oct 2024

Certified in Cybersecurity (CC) – ISC2

Jul 2024

AWARDS

1st Place – Poster Competition, SECedu Conference

Jun 2025

- Home network intrusion detection system using Snort and ELK Stack running on a raspberry pi

Top 10 – Jingle CTF, ACUCyS

Dec 2025
